## A MESSAGE TO ALL A.A.P.G. *BULLETIN* READERS

The amount and nature of material a scientist has to read in order to keep up-to-date in his field grow larger daily—so much so, that when you read the A.A.P.G. *Bulletin*, chances are that you skim.

We aren't condemning you for it—in fact, this is often the only solution to your problem. Yet hastily skimmed material has a way of assuming greater importance six months, several years, or even ten years later, when the scope of your personal work extends to cover new areas of thinking and research.

Perhaps it becomes suddenly important that you:

- locate a specific article with only the author's name or a snip of a title to go on
- find information on a particular oil pool, field, or province
- review all published material on a given subject.

### WHAT WOULD YOU DO IN ALL THREE OF THESE CASES?

If you meet the situation by going back and laboriously plowing through all your back issues of the *Bulletin* to consult the monthly and December indexes, then you have spent far too much time on the preliminaries. Also, you could completely overlook pertinent information found in the A.A.P.G. special publications, as these indexes do not include them.

But if these two books are on your shelves, then your studies can begin almost immediately:

COMPREHENSIVE INDEX OF THE PUBLICATIONS OF THE A.A.P.G., 1917-45  
COMPREHENSIVE INDEX OF THE PUBLICATIONS OF THE A.A.P.G., 1946-55

These indexes, together, intensively cover the *Bulletin* and all special publications through 1955, cross-indexing authors and titles of major papers, geological notes, discussions, and reviews, along with titles and cutlines for tables, figures, and maps of all development papers (June and July issues).
